

Inventory Module

Manage all of your inventory efficiently and effectively

The **Microix Inventory Module** is a feature-rich tool that allows you to efficiently and effectively manage your inventory. It works in conjunction with Microix's Requisition/Purchase Order Module to leverage off of a proven workflow approval process and fully integrate with MIP Fund Accounting™.

Key Features:

- Real-time item availability for ordering
- One-touch reporting for demand, stock levels, and valuation
- Lot, Serial, Expiration Date and Bin tracking
Multi-warehouse storage management
- Alerts for when items are running low
- Manage inventory adjustments for shortage, stolen and damaged items
- Print physical count sheets at anytime
- Generate purchase order for items that are running low and submit it through an approval process
- Inventory shopping list that enables employees to quickly request items from inventory
- User friendly interfaces, including a remote lite version via a web application.
- Track movement of inventory to identify fast or slow moving products. You can even see seasonal demand patterns
- Automate receiving, returns, and manual adjustments monitoring inventory levels
- Barcoding & Scanning: Print barcode label for inventory /asset items
- Purchase inventory with multiple units of measure
- Store image with inventory/asset items
- Build kits/produce assemblies
- Asset tracking (Excluding depreciation)
- Seamless integration with MIP Fund Accounting™
