

Cloud Companion Web Application

Optional Add-On

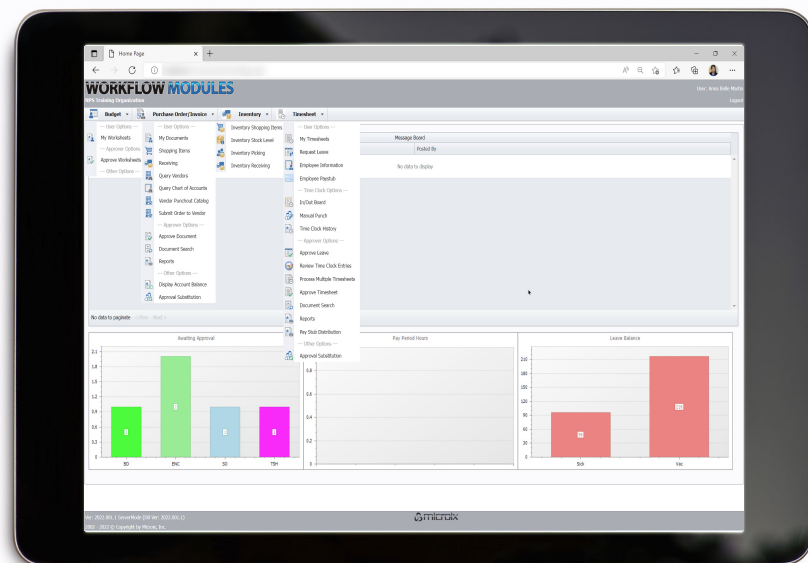

Create and/or approve your documents anywhere, anytime!

The Microix Cloud Companion Web Application is essential as today's workforce is fundamentally different and no longer limited to the office. We offer a convenient and affordable web application that empowers Microix customers to extend functionalities to remote users. This enables the ability to create and/or approve documents via a web browser on a tablet or pc.

Based on named user license (min 25 web pack). Requirement link available upon request

Key Features:

- Staff will have 24/7 access to create and approve documents as long as they have internet connection
- Gain control over your license usage and reduce costs with this optional add-on feature.
- Direct access to the most recent information within your organization.
- Deters the user from experiencing issues in licensing during collaborative efforts.
- Developed to ensure higher velocity and efficiency within your organization's daily processes
- Supports remote employees by providing them access to a "lite" version of Microix

Note: The web version is not as full featured as a windows application, and therefore some functions cannot be duplicated with a web based application. We recommend for "Lite" remote users to create and to approve documents via a web browser on a tablet or pc.
